Segue has provided the Air Force with custom IT solutions for more than a decade, through a business process focused approach to enterprise system development and comprehensive business intelligence reporting tools for financial and manpower offices. Our Systems Engineering methodology is service-based, with distinct groups providing Requirements Definition and Management, Development, and Quality Control. Our expertise spans systems critical to the Planning, Programming, and Budget Execution (PPBE) process, such as ABIDES, RAPIDS, PDS, and MPES. Our approach is well-suited to AF Enterprise system support needs, and delivers results - on schedule and within budget.
