

Mr. Scott Olgeaty (HIQ)

Q. Do you mean the solution has to be a product or are you also going to look at software as a service offering?

A. It's going to be based on our market research and on how industry reacts to our RFI. We may have a competition to get the product first and then based on that have a competition to solicit the implementation of the product. Another solution that has been pretty successful is that we may award to couple of folks and have a fly off for the best fit product.

Q. Are software as service offering possible?

Yes, absolutely.

HIB-ABSS

Mr. James Guy

Q. Can you talk a little bit about what the challenges will be within ABSS?

A. We don't expect big changes for ABSS since we are in sustainment until we are subsumed by DEAMS in the near future.

HIB-SSP III

Mr. Don Green

Q. Any idea of which quarter your RFP my might run?

A. RFP will run in the fourth quarter this fiscal year.

Q. Can you explain why you feel comfortable grouping all those programs together?

A. Any one of the systems feeds or draws data from the other, it is very interactive. You send data to one or two applications, that data goes to a third applications and they all draw from and sustain the data as needed by various users.

Q. So SSP I and SSP II did the same thing?

A. Yes, sir. SSP I and II are consolidated and on separate contracts.

Q. Do you have any idea on what award this will be?

A. No-other than it will be done under the NETCENTS contract

Q. Do you know the approximate size and function points on the combined systems?

A. LOL! I'm sorry and no I do not how many zeroes are in the number. We have the following to share:

Conwrite: 400k lines of code.

11 system interfaces

243 user interfaces

111 various reports created and provided

CBIS: 15k lines of code

11 system interfaces

1 user interface

86 various reports

CIDS: 360k lines of code

34 system interfaces

91 user interfaces

850 reports

CPRS: 88k lines of code

1 system interface

80 user interfaces

55 reports

ADIS: 700k lines of code

33 system interfaces

153 user interfaces

27 reports

Q. Is it worth it to you folks out there to answer that question?

A. Let's see how many brain cells out there we get to action on this. We'll get you an answer. We will get you a guestimate and have it ready for you folks tomorrow.

Q. What are the number of user interfaces and reports associated with those multiple systems?

A. Much of the data that is drawn from here is based on user enquires, so the user draws that information from the system so we don't have to draw from the systems.

HIB-EITDR

Capt Amy Sweazy

Q. Can we get your name?

A. Capt Amy Sweazy

Q. You show both NETCENTS 2 and 8(a) as the contract type which one is going to be?

A. This is an 8(a) competitive award.

Mr. Shofner Introduction

Q. Have you considered streaming this so that small businesses that could not afford to be here could see this in real time?

A. We have but it has been difficult to arrange. It is logistical challenge and not inexpensive, it's a capability we had to cut with funding reductions. But as a former small businessman I appreciate that travel is a challenge for many of our industry partners. But I will also say I can't help but express how much I value the personal interaction we get at industry days. All this said, we will continue to look at options to expand the reach of our industry days, to include electronic means.

Q. What is the on ramp for NETCENTS 2? (Mr. Hunter)

A. Which one? Are you kidding me? The first available SCAT for the on ramp would be the EISM and as I showed you yesterday we're not getting a lot of activity on that, we've had that since 2010. It'll be part of the conversation with Maj Howell before she leaves and we'll provide feedback to Mr. Culpeper and obviously Mr. Shofner. Right now we have not been given any direction.

Q. Did you know that the navy just went through a whole due diligent process for case management and that it might be worthwhile to discuss it with them?

A. Yes, we are aware and are working with the Navy to share market research/opportunity to combine our efforts.

HIB-HRSTS

Maj Carlence Campbell

Q. Over the last 12 months there have been several RFI sources sought regarding this program, has that process been concluded in the moving forward with your acquisition strategy?

A. Yes.

Q. When does this contract have to be in place, the start date?

A. HRSTS needs to be in place by April 2016

HIA-CMOS/OLVIMS

Lt Parrish (CMOS)/Lt Won (OLVIMS)

Q. Are there any OCI concerns

A. We will release that information when we release the information about the requirements.

Q. Wouldn't this one be more suitable for the App Services?

A. This requirement will remain an 8(a) set aside.

Q. So, what is the real difference between the two?

A. One is our life cycle support, our Senior SME's, our limitations team, our help desk personnel, another one is truly develop the code and fix the issues that are in there.

Q. Okay, so one is the 8(a) and the other is the App Services?

A. Correct sir.

Q. Why didn't you leave the two separate?

A. The level of growth is going down, so we are trying to consolidate the development and enhancement into one contract to share sustainment resources with the CMOS effort.

HIA-DMAPS

Mr. Robert Kodya, Jr.

Q. Have you started collecting content with MRO recently?

A. We have person up in Wright-Patterson working with the MRO to see what capability's we have. So, we are still up in the air with that but yes we do.

Q. The purpose of my question is, looking at the term it looks like the work load is going to go up and down as that takes place. So, rather than bidding firm fixed price, are you going to have some sort of cost/incentive for the variability in 2016 and 2019?

A. Right now we are still looking at firm fixed price.

Q. It's a firm fixed price scope how are you going to maintain that over period of three years?

A. That's something we'll have to look into.

Q. Third quarter 2014?

A. Yes

Mr. Herb Hunter (HIC)

Q. Mr. Hunter yesterday there was a billion dollar NETCENTS small business talk, are we going to see briefings?

A. No, you're not.

Q. Can you speak to the criteria is between the small businesses and full and open is under that option?

A. With these S-CAT's our staff will take them and map them line-by-line with the other S-CAT's and see which one fit. That's going to determine whether it goes to App Services or NetOps and then based on that requirement that's going to determine whether it goes to small or large. Only the contracting officer can make those determinations. So, NETCENTS 2 is like any other acquisition it has to go through a process.

Q. So, did she just say the \$900,000,000 is less than the \$900,000,000 for the requirement?

A. No, I think what she just said is because of the protests, every day that we are not available and a customer needs a contract vehicle to do their job that number may come down. It comes back up if more requirements are placed on board.

Q. Any word on the protest?

A. The best I can tell you is to go to the GAO website.

AFWay

Mr. John Hennigan

Q. Are you guys planning on putting a san out identifying the issues on a massive scale?

A. There have been and we will do more. We are committed to do some more education with this; it was recently brought to our attention on this latest go around.

Response to Vendors (AFWay)

Q. Was the cherry picking patent, that to happen at the C.O. level right because they are the one putting the RFP out and not the customer, right?

A. I don't have the details of it.

HIZ-AFSN

Mr. Brian Jabes

Q. Are you using another government 8(a) IDIQ or 8(a) competition?

A. This will be an 8(a) competition.

Q. But you're not going to do a task order on an existing 8(a)?

A. Correct we are not going to a task order on the sustainment of the contract.
